What do

J.P. Morgan Chase & Company, Inc.

The American Kennel Club

New York University

have in common?

They rely on SynCo Technologies for solutions to process their sensitive data.

J.P. Morgan Chase & Company, Inc.

SynCo Technologies manages critical and sensitive compensation related functions for J.P. Morgan Chase & Company, the second largest banking institution in the United States. SynCo processes bonuses, executive compensation, stock options, international employee compensation and developed the heritage domestic payroll and current international payroll systems. SynCo's highly skilled analysts and managers listened to and focused on the client's business requirements delivering vital information technology systems.

The American Kennel Club

SynCo provided The American Kennel Club who maintains the largest registry of purebred dogs in the world with key evaluation and project management services. SynCo's analysis and recommendations helped the AKC improve systems, streamline workflows and install enhancements to its registration system. SynCo also managed the development and implementation of the first ever online dog registration portal for this 120 year old institution.

New York University

From providing expert analysis and recommendations to complete system deployment, SynCo works with numerous schools and departments within New York University (NYU), the largest private university in the United States. SynCo developed large systems that track academic appointments, student immunization compliance, counseling center scheduling and school of education accreditation requirements as well as smaller projects to assist staff and personnel in maximizing efficiencies.

These are a few of the clients receiving personal service from SynCo Technologies on a daily basis. These leaders in their fields of business regularly depend on SynCo Technologies' ability to ask the right questions, understand the issues, focus on the business and deliver the technology essential to meet the requirements. The results are technology supporting the business – not technology driving the business.

SynCo's philosophy of generic rule-based programming (moving the maintenance of business rules, presentation and data structures to the application) results in systems with longer life cycles, more flexibility and greater user empowerment.
